## - 1934 - British Wickless Stoves and Blow Lamps

Important improvements are featured in the Coleman-Monitor range of wickless stoves and blow lamps of the pattern familiar to the trade throughout the world. The stoves are made in both silent and "roarer" types, and embody an original safety device which prevents over-pumping, so that any possible danger of an accident is avoided. Every stove is fitted with a pilot lighter which ensures easy lighting, while the inclusion of a reinforced burner stem permits a new burner to be fixed without weakening the joint. There are several sizes, in addition to a neat outfit for motorists or "hikers" which comes complete in a compact tin box.

For industrial purposes is a series of blow lamps for either petrol or kerosene fuel. A very fine kerosene-operated brazing lamp deserves special mention. This has a heavy solid drawn and non-porous brass body with a powerful burner and improved baffle plate. Ease in handling is an im-

portant feature, while the fact that it can be used in any position adds to its utility. A regulating valve permits fine adjustment, and an efficient pressure gauge is also fitted. It is understood that this appliance, which embodies the safety device above referred to, is largely used by the British railway companies.

An attractive illustrated booklet, describing all these lines is issued by the manufacturers, and may be obtained on application to the Australian distributors, the Coleman Quick-lite Co. of Australia, 185 William-street, Melbourne, 718 Harris-street, Ultimo, Sydney, and 84 Pirie-street, Adelaide.

## Monitor Blow Lamps

For use with Petrol or Benzoline

Built from heavy gauge brass. All patterns fitted with automatic safety device, and ever-cool all metal handle. Very suitable for painters' use, and telephone and electrical work.
